Society for Translational Oncology Fellows’ Forum (STOFF)
December 8-11, 2016
Cary, NC

This 3-day intensive forum brings together a cadre of fellows and junior faculty (within 5 years of training completion) from leading oncology fellowships (medical, surgical, oncology, and surgical subspecialty) in the United States to educate rising stars in translational cancer research. A select number of oncology fellows from Japan may also apply to attend this prestigious, award-winning forum as international scholars.

STOFF is conducted under the auspices of the Society for Translational Oncology (STO) which conducts the workshop on the campus of the SAS Institute (Cary, North Carolina) enabling their experts in big data to also participate as faculty. SAS generously provides meeting space to host STOFF in their Executive Briefing Center.

Distinguished Faculty

STOFF faculty are researchers and educators with connections to the National Cancer Institute (NCI), the US Food and Drug Administration (FDA), and leading US cancer centers.
